

## CREATE YOUR PERFECT MIX WITH TOTALLY WICKED'S NICO-ICE MIXING GUIDE

The Totally Wicked NICO-ICE mixing kit enables customers to mix e-liquid at home. E-liquid mixing has never been so simple and this mixing guide will allow you to create e-liquid like the professionals in easy to follow steps.

1. Choose your e-liquid mixing bottle (e.g. 30 ml) and add the required volume of flavour concentrate(s) using the 3 ml pipette.
2. Add the required volume of PG & VG diluent using the 10 ml syringe & blunt needle.
3. Add the required volume of NICO-ICE (PG or VG base) using the 10 ml syringe & blunt needle.
4. Replace dropper & cap on e-liquid mixing bottle. Shake thoroughly.

### To mix 30 ml of e-liquid:

Look at tables 1-3 and determine which type of e-liquid you want to mix. Consider the following:

- 70 % PG & 30 % VG e-liquid means 7 parts of the e-liquid is PG & 3 parts is VG
- 50 % PG & 50 % VG e-liquid means ½ of the e-liquid is PG & ½ is VG.
- 30 % PG & 70 % VG e-liquid means 3 parts of the e-liquid is PG & 7 parts is VG.

For example, say your all day vape is a 30:70 PG:VG (High VG) 0.3 % strength e-liquid. Look at table 3, column 2. You'll need to add 6 ml of flavour concentrate, 3 ml of PG, 16.5 ml of VG, and finally 4.5 ml of NICO-ICE (VG BASE).

**Table 1 – 70 % PG 30 % VG**

	1	2	3	4
<b>STRENGTH (%)</b>	<b>0.0</b>	<b>0.3</b>	<b>0.6</b>	<b>1.0</b>
Flavour (ml)	6.0	6.0	6.0	6.0
PG (ml)	15.0	10.5	6.0	0.0
VG (ml)	9.0	9.0	9.0	9.0
NICO-ICE (PG) (ml)	0.0	4.5	9.0	15.0

**Table 2 – 50 % PG 50 % VG**

	1	2	3	4
<b>STRENGTH (%)</b>	<b>0.0</b>	<b>0.3</b>	<b>0.6</b>	<b>1.0</b>
Flavour (ml)	6.0	6.0	6.0	6.0
PG (ml)	9.0	4.5	0.0	9.0
VG (ml)	15.0	15.0	15.0	0.0
NICO-ICE (PG) (ml)	0.0	4.5	9.0	0.0
NICO-ICE (VG) (ml)	0.0	0.0	0.0	15.0

Table 3 – 30 % PG 70 % VG

	1	2	3	4
<b>STRENGTH (%)</b>	<b>0.0</b>	<b>0.3</b>	<b>0.6</b>	<b>1.0</b>
Flavour (ml)	6.0	6.0	6.0	6.0
PG (ml)	3.0	3.0	3.0	3.0
VG (ml)	21.0	16.5	12.0	6.0
NICO-ICE (VG) (ml)	0.0	4.5	9.0	15.0

Note: To mix 10 ml of e-liquid, simply divide the volumes in tables 1-3 by 3. To mix 20 ml of e-liquid, simply divide the volumes in tables 1-3 by 1.5.

**TIPS:**

- Tables 1-3 flavour concentrate volumes are calculated at 20 % of final e-liquid mix. Less is often more when it comes to flavour, but if you feel your 30 ml of e-liquid could do with a little more, then simply add an extra 0.5 ml to your e-liquid mix.
- If you're slightly under or over the volume of flavour concentrate/diluent it won't make any significant difference to the flavour.
- VG can be a difficult liquid to mix flavours in, especially at 0 % nicotine strength. High VG e-liquid (more than 70 % VG) may be difficult to mix with a handful of flavours at 0 % nicotine strength. If you can see the flavour will not mix, you need to add more PG to the e-liquid.
